## **DETAILED ACTION**

### ***Election/Restrictions***

1. Claims 6-11 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected group, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 12/21/04.
2. Applicant's election of claims 1-5 in the reply filed on 12/21/04 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

### ***Information Disclosure Statement***

3. The information disclosure statement filed 12/21/04 fails to comply with 37 CFR 1.98(a)(1), which requires the following: (1) a list of all patents, publications, applications, or other information submitted for consideration by the Office; (2) U.S. patents and U.S. patent application publications listed in a section separately from citations of other documents; (3) the application number of the application in which the information disclosure statement is being submitted on each page of the list; (4) a column that provides a blank space next to each document to be considered, for the examiner's initials; and (5) a heading that clearly indicates that the list is an information disclosure statement. The information disclosure statement has been placed in the application file, but the information referred to therein has not been considered.

### ***Drawings***

4. Figures 14a and 14b should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

5. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the motherboard in claims 3-5 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering

of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 112***

6. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

7. Claims 3-5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 3 recites the limitation "said package" in line 3. There is insufficient antecedent basis for this limitation in the claim.

Claims 3-5 are also indefinite because it is not clear if the motherboard is either the substrate, the bottom plate, or another separate component.

***Claim Rejections - 35 USC § 102***

8. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

9. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Satoh et al. (6,274,955).

Regarding claim 1, Satoh et al. shows a small vibration motor (Figure 1 and 3) comprising:

- A rotor yoke (55) in which an unbalance weight (57) and a magnet (56) are placed and which is fixed to a shaft (53);
- A driving torque generating coil (46) that is placed on a substrate (9 through core 45, support 42 and base 41) so as to face said magnet;
- Driving electronic parts (16, 17) placed on said substrate (9), which comprises an integrated circuit comprising non-molded bare chips, supplying an alternating current to said driving torque generating coil to rotate said rotor yoke around said shaft;
- A bottom plate (1) which supports said substrate and to which a radial bearing that said shaft is engaged with is fixed; and
- A cover (2) for covering said rotor yoke, said driving torque generating coil and said driving electronic parts, which is adhered to said bottom plate.

Regarding claim 2, Satoh et al. also shows said substrate comprising flexible substrate, and said driving torque generating coil is electrically connected to said flexible substrate through three terminals (47).

Regarding claim 3, Satoh et al. also shows a terminal (27) that is formed on a substrate protruded from said package, and engaged with a connector (49) mounted on a motherboard, and thereby electrically connected.

Regarding claim 4, Satoh et al. also shows a terminal (7) that is placed on said cover or said bottom plate (1) and engaged with a socket mounted on a motherboard (9) and thereby electrically connected.

Regarding claim 5, Satoh et al. also shows a land (63) which is formed on a surface of said cover or said bottom plate (1) and in contact with a motherboard (9), and electrically connected to another land formed on said motherboard.
